City of Norfolk—Utility Test Hole and Soil Boring Activities

December 21, 2021

The City of Norfolk Department of Utilities is continuing design work to modify two water mains next to the Commonwealth Railway, between Nansemond Parkway and Sportsman Boulevard. Accumark, Inc. will dig test holes to confirm the location and depth of buried utility crossings; and, GET Solutions, Inc. will perform geotechnical investigations (soil borings) to determine subsurface conditions. This work is currently planned to begin over the next several weeks along the railroad right-of-way and abutting properties in your area.

Project Details:
- Crews from both firms will work in the project area over the next few months.
- They will have their company identification on them at all times.
- Crews may need access to the exterior of your property for identification and sampling efforts.
- Crews may also need to temporarily place survey flags or paint markings identifying the locations of existing utilities prior to performing utility test holes and soil borings.
- Property will be restored to its original condition.
- At no time will the crews request to enter your home.

If at any time you have questions or concerns, please do not hesitate to contact the project manager, Dan Riley, at (757) 266-9954.
